## (a) Four-origin temporal evaluation

O1 2017-07-01 O2 2017-10-01 O3 2018-01-01 O4 2018-04-01

Eligible training → 60-day warm-up → 60-day evaluation

**Fit frozen LR at $T_o$** Begin daily evaluation

## (b) Feedback timing: deadline / closed

**On time**

$a_i$ — Approval

$v_i = r_i$ — Delivery

$d_i = e_i$ — Admission

$t$ — Daily update

**Late**

$a_i$ — Approval

$r_i = d_i = e_i$ — Admission

$t$ — Daily update

$v_i$ — Late delivery

## (c) Frozen prediction with daily recalibration

Order features $x_i$ → Frozen LR S1: cyclic month → Raw $p_i$ → logit($p_i$) → + → $\sigma(\cdot)$ → Updated $q_{i,t}$

Eligible history Past ($p_j$, $y_j$)

- Expanding: all history
- Rolling-60: admission time
- Approval-60: approval time

→ Daily intercept $b_{o,t}$

Small pool: use Raw
